

Dri-Fresh® Supreme™ ovenable absorbent pads

Dri-Fresh® Supreme™ ovenable pads are designed as a dual purpose absorbent pad. Firstly, they offer effective absorbency in the pre-packed state, then they come into their own during the cooking process. This is when they will absorb fat and juices released which result in cleaner, crispier, healthier food and safer easier handling.

- > Effective absorbency before and during cooking
- > Dri-Fresh® Supreme™ pads are recommended for use in oven and grills at temperatures up to 200°C
- > No need to remove the absorbent pad before cooking
- > Cook the food in the tray reducing consumer handling
- > Healthier, crispier and cleaner foods
